COMPANY PRESENTATION

i2solutions GmbH translates the challenges of digitization into database-driven IT solutions.

This automation helps our customers reduce complexity and grow intelligently.
For more than 15 years, i2solutions has been developing sophisticated IT solutions for medium and large-sized companies, from industry to service. The guidance of every customer throughout the value creation process has been a part of our philosophy since the very beginning. Our areas of expertise range from architecture and implementation, to the maintenance of information and application systems. i2solutions provides comprehensive advice and support in every area of data-driven decision making.

Network
- Mitglied ZENIT e.V.
- bitmi Federal Association IT-Mittelstand e.V.
01 ABOUT US

Our Key Areas
- Digital Boardroom
- Security
- Development
- Research

What we stand for
- Conception, execution, and care of IT-Architectures
- Conception and implementation of standard and custom software
- Strategic consulting, and operational implementation (Process-(re)design), optimization of mass and routine operations
- Management support through performance indicator visualization tools
Dynamic views and filter selection possibilities, access and analysis across all terminals, seamless integration of every data-source, easy access to current system data, and more.
Visualization tools will help you optimize the planning, control, and coordination of processes based on current performance and accounting data as well as external market data.

Focus your internal and external data sources into a centralized feedback system so that all performance indicators can be compressed and graphically processed in your cockpit in real time.

Overall Equipment Effectiveness is a key performance indicator system that has proven itself to many industrial companies to be the primary indicator for measuring and optimizing production performance.
Analysis, Interpretation, and Evaluation: Closing security gaps
Opt for a training session or professional check-up by one of our experts, and don’t give cyber attacks a chance.
i2sDatenschleuse
Intelligent monitoring of mobile data carriers in companies and organizations

The i2sDatenschleuse is a security terminal that allows your employees to safely transfer data from mass storage devices to your corporate network thereby closing relevant vulnerabilities to malicious software.

03 SECURITY

Security
Security gaps affect your company in a variety of ways. Identify these gaps in order to systematically increase the security level of your company.

Asset Management
The Asset Manager is an intelligent inventory tool for administering the assets in your IT infrastructure. Learn more about it!

TAKE THE NEXT STEPS TO PROTECT YOUR COMPANY

Avoid compromises and long-term research. Choose an individual solution to match your ideas.
Our Research
Your Success

i2solutions GmbH specializes in the research and development of innovative production technologies. Since 2013, we’ve been an official partner of the RWTH Aachen Campus for the Cluster Smart Logistics.
BIG PRO

The application of Big Data technologies for error management in production.

IMM PRO

The creation of a teaching platform for immersive learning in a virtual classroom.

SMART FM

Error management integration in Smart Factories.
Selected Success Stories
With us, not only are you in good hands, but in the best company as well. Looking back, we take great pride in the many exciting and successful projects we've completed with our distinguished company partners.
